Art Unit: 3726

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

2. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art set forth in the specification in view of Tagawa et al (5,056,581).

The prior art set forth at page 1 of the specification teaches that it was known to use fasteners to connect a forged ring gear to a cast differential casing made of steel or ductile iron. Tagawa et al teach forming a ring with forged projections and casting a housing to the ring. It would have been obvious to one of ordinary skill to modify the process of the prior art to substitute the casting of the housing to the ring gear to eliminate the fasteners and to quickly attach the gear to the housing. The limitations to machining the teeth or casing are considered to have been obvious matters of choice and within the skill of the ordinary artisan. It is noted that there is no disclosure of the machining causing any new or unexpected results. The specification teaches at page 5, lines 14-15 that it was known to induction harden gear teeth. Official Notice is taken of near-net forging as a process for reducing the need for subsequent machining. It would have been obvious to near net forge the ring gear to reduce machining.

3. Applicant's arguments filed 6/12/03 have been fully considered but they are not persuasive. Applicant argues that there is no mention of fasteners in the Tagawa reference and that the examiner therefore cannot argue that the APA cannot be modified to eliminate fasteners. The examiner contends that an explicit teaching is not required and that upon observation of Tagawa one of ordinary skill would have

Art Unit: 3726

recognized that fasteners were not used to attach the housing and ring when the housing was cast on the ring and would have been motivated to eliminate the use of fasteners in the APA.

Applicant argues that the examiner's argument that the machinings set forth in claim 7-9 are obvious matters of choice is improper and sets forth why the procedure is desirable. The examiner contends that one of ordinary skill would be aware of the advantages of machining the housing and then the gear teeth and would know when choose such a sequence.

Applicants improperly state the examiner's position on near-net forging. The examiner took official notice of the advantages of precision forging. He did not take official notice of near-net forging of a ring gear.

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
